

E9 205 Machine Learning for Signal Processing

Non-negative Matrix Factorization

10-08-2016

Audio Composition

- ❖ Audio signal generated by a number of individual components (example - different instruments).

Audio Composition

- ❖ Audio signal generated by a number of individual components (example - different instruments).

Audio Composition

- ❖ Audio signal generated by a number of individual components (example - different instruments).

<http://mlsp.cs.cmu.edu/courses/fall2014/lectures/slides/class10.nmf.pdf>

Audio Decomposition

- ❖ Decomposing an audio signal back to its fundamental components.

Required Properties for Decomposition

- ❖ Given input is sequence of power spectral vectors (positive) - power spectrogram $\mathbf{V}_{k \times n}$
- ❖ Decomposition into a sequence of component power spectral vectors (positive) - basis $\mathbf{b}_{k \times 1}^j$
- ❖ At each frame - non-negative combination of components are allowed - +ve weights $\mathbf{w}_{j \times 1}$

$$\mathbf{V} = \mathbf{B}\mathbf{W}$$

- ❖ Applying NMF to decompose the components

NMF Audio Example

Basis Estimation from Source I

Basis Estimation from Source II

Finding the Mixing Weights

given

$$V = BW$$

$$\begin{bmatrix} B_1 & B_2 \end{bmatrix} \begin{bmatrix} w_1 \\ w_2 \end{bmatrix}$$

given

estimate

Finding the Mixing Weights - Known Sources

estimate

$$\mathbf{B}_1 \mathbf{W}_1$$

estimate

$$\mathbf{B}_2 \mathbf{W}_2$$

$$\mathbf{V} = \mathbf{B} \mathbf{W}$$

The equation $\mathbf{V} = \mathbf{B} \mathbf{W}$ is shown, with $\mathbf{B}$ and $\mathbf{W}$ circled in yellow. An arrow points from the circled $\mathbf{B}$ to the matrix $\begin{bmatrix} \mathbf{B}_1 & \mathbf{B}_2 \end{bmatrix}$, which is labeled "given". Another arrow points from the circled $\mathbf{W}$ to the matrix $\begin{bmatrix} \mathbf{W}_1 \\ \mathbf{W}_2 \end{bmatrix}$, which is labeled "estimate".
