

Properties of SVM

- Flexibility in choosing a similarity function
- **Sparseness** of solution when dealing with large data sets
 - only support vectors are used to specify the separating hyperplane
- Ability to **handle large feature spaces**
 - complexity does not depend on the dimensionality of the feature space
- Overfitting can be controlled by soft margin approach
- **Nice math property**: a simple convex optimization problem which is guaranteed to converge to a single global solution
- Feature Selection

SVM Applications

- SVM has been used successfully in many real-world problems
 - text (and hypertext) categorization
 - image classification
 - bioinformatics (Protein classification, Cancer classification)
 - hand-written character recognition

Application 1: Cancer Classification

- E.g., find the most compact panel of breast cancer biomarkers from microarray gene expression data for 20,000 genes:

Application 1: Cancer Classification

Linear Versus Non-linear SVMs

Application 1: Cancer Classification

Weakness of SVM

- **It is sensitive to noise**

- A relatively small number of mislabeled examples can dramatically decrease the performance

- **It only considers two classes**

- how to do multi-class classification with SVM?
- Answer:

1) with output m , learn m SVM's

- SVM 1 learns "Output==1" vs "Output != 1"
- SVM 2 learns "Output==2" vs "Output != 2"
- :
- SVM m learns "Output== m " vs "Output != m "

2) To predict the output for a new input, just predict with each SVM and find out which one puts the prediction the furthest into the positive region.

Application 2: Text Categorization

- Task: The classification of natural text (or hypertext) documents into a fixed number of predefined categories based on their content.
 - email filtering, web searching, sorting documents by topic, etc..
- A document can be assigned to more than one category, so this can be viewed as a series of binary classification problems, one for each category.

Application 2: Text Categorization

IR's vector space model (aka bag-of-words representation)

- A doc is represented by a vector indexed by a pre-fixed set or dictionary of terms
- Values of an entry can be binary or weights

$$\phi_i(x) = \frac{\text{tf}_i \log(\text{idf}_i)}{\kappa},$$

- Doc $x \Rightarrow \phi(x)$

Application 2: Text Categorization

- The distance between two documents is $\langle \phi(x) \phi(z) \rangle$
- $K(x,z) = \langle \phi(x) \phi(z) \rangle$ is a valid kernel, SVM can be used with $K(x,z)$ for discrimination.
- Why SVM?
 - High dimensional input space
 - Few irrelevant features (dense concept)
 - Sparse document vectors (sparse instances)
 - Text categorization problems are linearly separable

Application 2: Text Categorization

					SVM (poly) degree $d =$					SVM (rbf) width $\gamma =$			
	Bayes	Rocchio	C4.5	k-NN	1	2	3	4	5	0.6	0.8	1.0	1.2

					combined: 86.0					combined: 86.4			

Application 3: Handwriting Recognition

For example MNIST hand-writing recognition.

60,000 training examples, 10000 test examples, 28x28.

Linear SVM has around 8.5% test error.

Polynomial SVM has around 1% test error.

SVMs : full MNIST results

Classifier	Test Error
linear	8.4%
3-nearest-neighbor	2.4%
RBF-SVM	1.4 %

Some Considerations

- Choice of kernel
 - Gaussian or polynomial kernel is default
 - if ineffective, more elaborate kernels are needed
 - domain experts can give assistance in formulating appropriate similarity measures
- Choice of kernel parameters
 - e.g. σ in Gaussian kernel
 - σ is the distance between closest points with different classifications
 - In the absence of reliable criteria, applications rely on the use of a validation set or cross-validation to set such parameters.
- Optimization criterion – Hard margin v.s. Soft margin
 - a lengthy series of experiments in which various parameters are tested

Software

30 SVMs : software

Lots of SVM software:

- LibSVM (C++)
- SVMLight (C)

As well as complete machine learning toolboxes that include SVMs:

- Torch (C++)
- Spider (Matlab)
- Weka (Java)

All available through www.kernel-machines.org.
